COVID-19 Weekly Update – 5th October 2020

Data correct as of 5th October 2020 but subject to revision

Compiled and published by Hampshire Public Health

5th October 2020

This report provides information on the COVID-19 pandemic in Hampshire and includes:

 COVID -19 infections – the total numbers of cases, rates within Hampshire's districts and overall picture across England

 Deaths - total deaths, which also includes those extra deaths above the number we would normally expect in Hampshire, over recent months

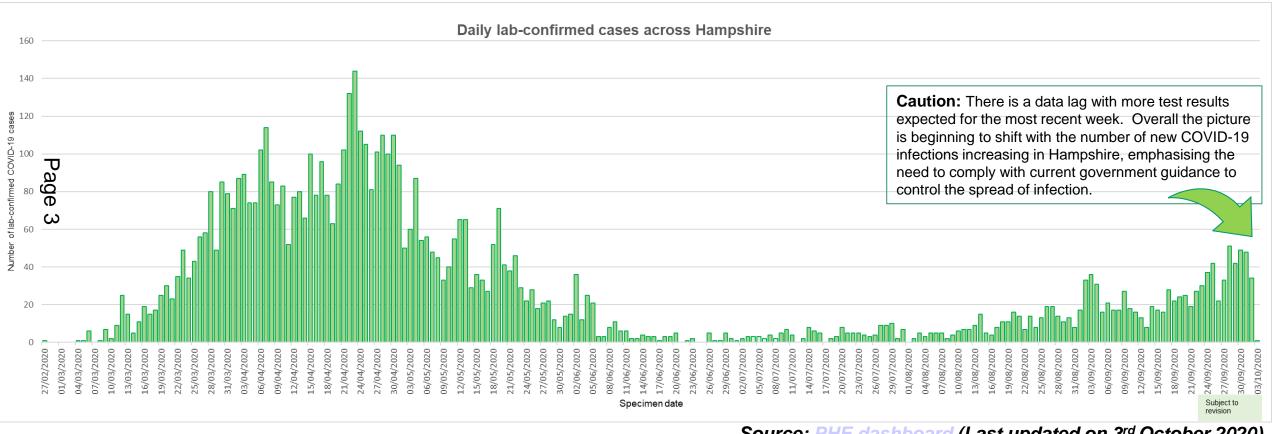

Infections – daily COVID-19 cases in Hampshire showing how the epidemic has progressed over time – the 'epidemic curve'

Although infection rates since June have been low, the picture is now showing an increase in new infections in Hampshire. The number of Hampshire cases that were tested between 25 September and 2 October have been revised, this is due to a national issue identified in the automated process. The issue affected the total new cases published on the COVID-19 dashboard and has now been resolved.

Data only includes those cases which have tested positive

Source: PHE dashboard (Last updated on 3rd October 2020)

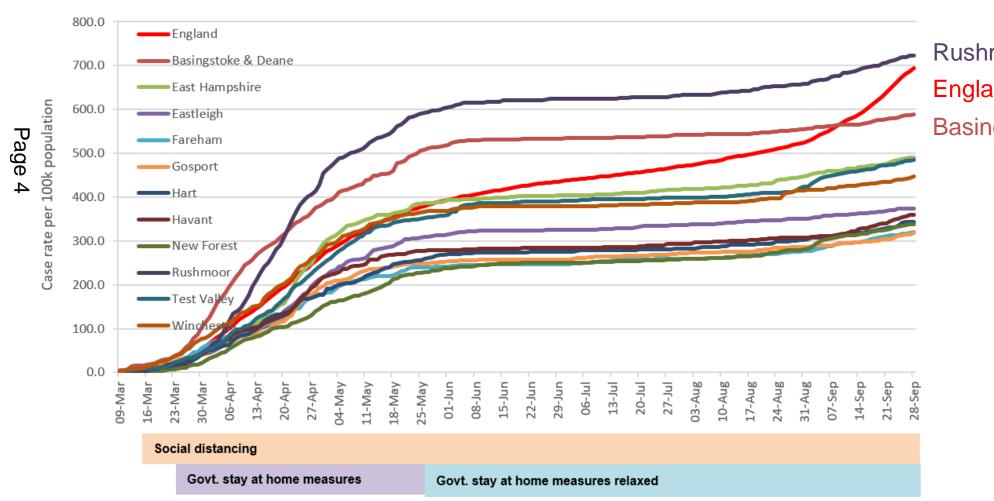

The data now includes all cases, those which have been tested by NHS/PHE laboratories and by the Government's commercial testing partners

Infection rates – Total cases per 100,000 people across Hampshire Districts

- The trend in the total figures shows that the infection is slowly rising across Hampshire
- The highest infection rate has been in the Rushmoor district, where it has been greater than the average infection rates for England

COVID 19 - Case rate per 100k population: Hampshire districts and England

Rushmoor

England

Basingstoke & Deane

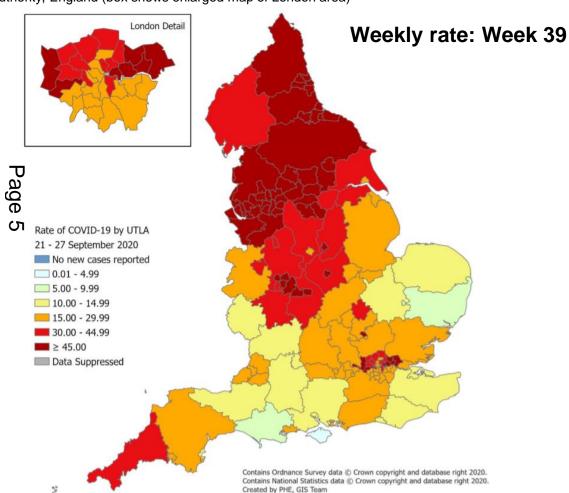

Infections- number of cases of COVID-19 per 100,000 people across

England

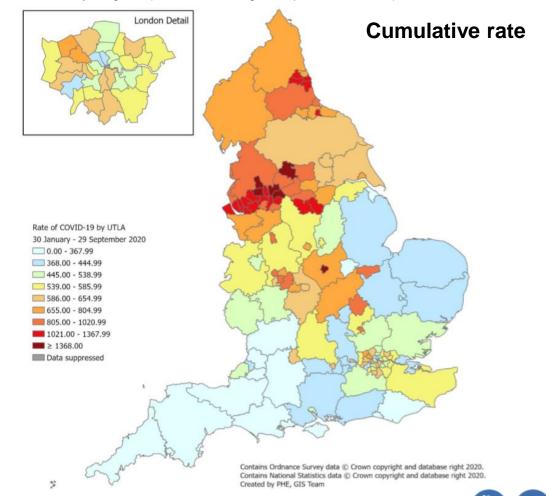

Infections are continuing to increase, though at different rates in different places.

Case detections in England increased from 26,259 in week 38 to 29,797 in week 39. Case rates remain highest in North West and Yorkshire and Humber.

Weekly rate of COVID-19 cases per 100,000 population tested under Pillar 1 and 2, by upper-tier local authority, England (box shows enlarged map of London area)

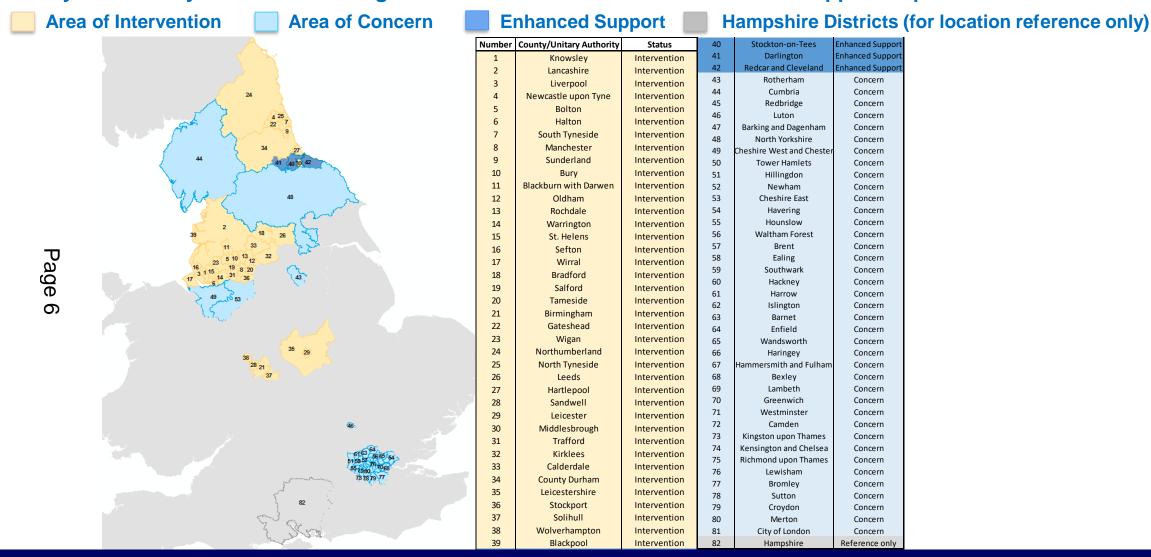

Cumulative rate of COVID-19 cases per 100,000 population tested under Pillar 1 and 2, by upper-tier local authority, England (box shows enlarged map of London area).

Areas on the Coronavirus Watchlist

County and Unitary Authorities in England that contain districts with a level of support- Updated 1st October 2020

Areas on the Coronavirus Watchlist

County and Unitary Authorities in England that contain districts with a level of support- Updated 1st October 2020

Whilst the Hampshire weekly incidence rate is relatively low at 12.35 per 100,000, it reflects a general trend towards larger numbers of cases and the need to remain vigilant.

Table 1: Local Authority watchlist areas - Areas of intervention

Lower Tier Local Authority	Individuals tested per day per 100,000 population (7 day moving average)	Trend	Incidence per 100,000 population (weekly)	Trend	Contain Framework Watchlist Status – week beginning 18 September	Change in Watchlist Status from previous week	Area with household mixing prohibited?
Bolton	240.8	ŵ	196.6	ů	Intervention	-0	YES

Data for specimens taken between 11 September and 17 September as extracted on 22 September.

Trend arrow indicates whether there has been an increase, decrease or no change between this week and last week (specimens taken between 4 and 10 September)

Some Local Authority areas have been included as part of wider geographical interventions

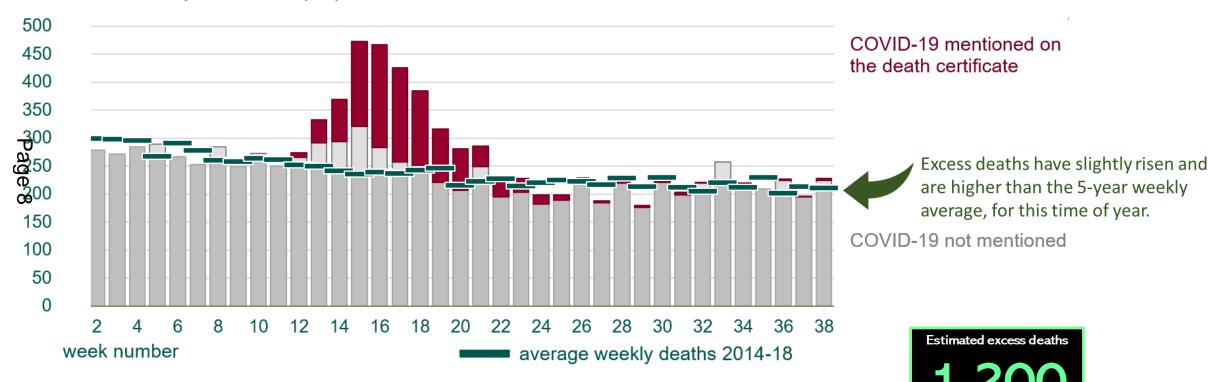

Deaths

There were **3** COVID-19 deaths in the latest week. Excess (extra) deaths have slightly risen above the number we would usually see at this time of year.

All deaths in 2020 by week, with proportion where COVID-19 is mentioned

ONS - Deaths registered weekly in England and Wales, provisional
